

IS THE TSA RIGHT FOR ME?

The TSA is a perfect temporary treatment for patients that snore or for those diagnosed with obstructive sleep apnea. It is also an ideal temporary solution for patients looking for the following:

COMPLIANCE/TRIAL APPLIANCE: If you are a first-time patient considering treatment with an oral appliance, the TSA is an ideal, affordable way to test your compliance prior to committing to a premium appliance.

BACK-UP/REPAIR APPLIANCE FOR CURRENT APPLIANCE WEARERS: The TSA serves as a perfect backup appliance if you damage or lose your current premium appliance, or if your family pet decides to make it a chew toy. You can conveniently locate your stored TSA from your medicine cabinet, for example, while your premium appliance is being repaired or replaced without having to worry about forgoing treatment.

COMPACT TRAVEL ALTERNATIVE FOR CPAP USERS: CPAP is inconvenient to travel with. When flying on an airplane, it is another item you have to check through security. When staying at a hotel, it requires you to make the tough decision of what to unplug from the electrical outlet. The TSA is a perfect, inexpensive, effective, and light-weight travel alternative to CPAP therapy as it conveniently fits in your carry-on and does not require electricity to function.

SPEED OF TREATMENT: As opposed to premium appliances that can take anywhere from two to four weeks to manufacture, the TSA can be fabricated within 24 hours, allowing you to experience real-time, almost instantaneous treatment. Please note time frames do not include shipping and may fluctuate with demand.

HOW DO I GET A TSA?

Just like The SUAD™ Device, the TSA is available from a specially trained dental practitioner in your area. The custom-fitting for the appliance is simple and painless.*

First Visit: Your dental practitioner will discuss your sleeping habits and may refer you to a sleep clinician for further evaluation. Once you are ready to begin, impressions of your teeth will be taken along with a bite registration to determine how far forward to move your jaw.

Second Visit: Your custom-made TSA will be fitted and adjusted, if necessary.

Third Visit: Your practitioner will check your results and make any necessary adjustments.

Once you are ready to continue treatment with The SUAD™ Device, your practitioner will be able to conveniently use your TSA to obtain an accurate registration of your bite and will already know how far forward to advance your jaw making the custom-fitting process even more simpler!

*Please note: Number and type of visits may vary, depending on your practitioner.

A Trial Appliance, A Compliance Appliance, A Repair Appliance, & An Ideal Travel Option To CPAP Therapy

The Temporary SUAD™ Appliance (TSA)

A clinically proven, temporary dental sleep appliance designed to mimic the functionality of The SUAD™ Device and effectively treat snoring and obstructive sleep apnea.

Comfortable • Compact • Convenient • Effective

THE TSA

The Temporary SUAD™ Appliance (TSA) is a temporary dental sleep appliance developed for the effective treatment of snoring and obstructive sleep apnea (OSA). Although temporary, the TSA functions in the same manner as a premium appliance by comfortably positioning your lower jaw forward to maintain an open airway. The TSA fully mimics the functionality and design of the renowned SUAD™ Device, a premium dental sleep appliance at only a fraction of the cost.

FEATURES AND BENEFITS

Aside from being compact, comfortable, and discreet, the TSA has the following benefits:

CLINICALLY VALIDATED: The TSA is safe, effective, and FDA cleared to market for snoring and OSA.

CUSTOM-MADE: Unlike many other temporary devices on the market, the TSA is not a chair-side fit appliance. The TSA is fabricated in lab, using impressions of your teeth taken by a specially trained dental practitioner, providing you with an effortless fit.

SMALL IN SIZE: As opposed to other temporary appliances, the TSA is not bulky in size and provides you with the utmost comfort.

NON-RESTRICTIVE IN MOVEMENT: While wearing the TSA, you will be able to fully open and close your mouth, yawn, drink, take oral medication, and even speak clearly.

EASILY ADJUSTABLE: The TSA can be easily adjusted by either adding or removing extra nylon advancement spacers; a simple process that can be done by you or your practitioner.

RESILIENT: The TSA is intended to have a lifespan of approximately three months of continuous usage. Please note that the TSA is not intended for long-term night usage as it is only a temporary appliance.

COMPARING THE TSA

The TSA effortlessly surpasses rivaling temporary dental appliances and over-the-counter solutions.

THE TSA VS. OTHER TEMPORARY APPLIANCES

Unlike competing temporary dental appliances that are also prescribed by dental practitioners, the TSA has the following benefits:

- ▶ Custom fabricated using impressions of your teeth. Please note: the TSA is **not** a boil-and-bite and is **not** a chair-side fit appliance.
- ▶ Mimics the comfort, fit, functionality, and adjustability of a premium appliance.
- ▶ Does not impinge on tongue space, allows for improved retention, and has minimal bulk.
- ▶ FDA cleared to market for snoring and OSA.
- ▶ Comes packaged with a free Morning Repositioner.

THE TSA VS. OVER-THE-COUNTER SOLUTIONS

Over-the-counter (OTC) solutions consist of anti-snoring mouth guards, pillows, sprays, nasal strips, herbal capsules, or head/jaw bands that are generally mass-produced.

Feature	TSA	OTC
Safe, effective and FDA cleared for snoring and OSA.	✓	
Prescribed by a certified dental or medical practitioner.	✓	
Custom-made using impressions of your teeth, taken by a certified dental practitioner.	✓	
Available for purchase at a wellness/nutrition center, kiosk in the mall, grocery store, over the phone, or online.		✓
May be produced in a foreign country and shipped to North America.		✓

ABOUT STRONG DENTAL

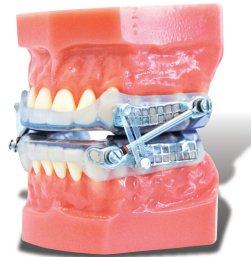

Strong Dental is a quality-oriented dental laboratory specializing in the manufacturing and distribution of premium dental sleep appliances for the effective treatment of snoring and OSA. Established and located in Leamington, Ontario, Canada, Strong Dental works directly with your dental practitioner to provide you with a comfortable and convenient treatment for your sleep-disordered breathing. Strong Dental is a proud platinum sponsor of the American Academy of Dental Sleep Medicine and actively supports the research of oral appliance therapy.

STRONG DENTAL'S SIGNATURE APPLIANCES:

Founding President and CEO, Patrick J. Strong is the developer of Strong Dental's signature appliances, which are quickly becoming the treatment of choice for many patients throughout North America. Along with the TSA, our appliance line includes:

THE SUAD™ DEVICE:

The SUAD™ Device is a premium dental sleep appliance for the effective treatment of snoring and all levels of OSA. It is an effective, FDA cleared, comfortable, and durable alternative to the tangling attachments of CPAP therapy or the invasiveness of corrective surgery. Pick up our pamphlet entitled "The SUAD™ Device" for more information.

THE MORNING REPOSITIONER:

When wearing a dental sleep appliance, there's the possibility that your lower jaw may feel more comfortable staying forward during the day. Doing a very simple exercise of clenching your teeth together can help strengthen your muscles, which helps to return your lower jaw to its original position. The Morning Repositioner is a simple dental appliance that sits on your lower teeth and aids in the exercise. Every TSA and SUAD™ Device manufactured comes packaged with a free Morning Repositioner.
